

ADC

THE SPECIALIST DRAINAGE COMPANY

CCTV SURVEYS . JETTING & TANKER OPERATIONS
SILT CLEARANCE . RELINING & EXCAVATION
PREVENTATIVE MAINTENANCE

ADC the Specialist Drainage Company

We believe that every drainage problem has an answer. ADC's solutions are possible with dedicated experienced management, expert consultants and some of the very latest equipment.

The Directors at ADC (East Anglia) Ltd are constantly looking at ways to improve the companies service to their customers. We are committed to searching for new technology and innovations.

A Nationwide Service

Based in the Heart of The Fens, the most dependant area in the UK relying on good drainage, ADC's business has grown and our contracts now cover most parts of the United Kingdom. From the South Coast to the Scottish Borders and across to Anglesey, ADC's customers are enjoying a dependable, quality service.

Our extensive range of drainage services includes CCTV surveys, jetting and tanker operations, drainage system repair and more. We are often contracted long term to maintain drainage networks to minimize clients risk to potential flooding.

ADC also has the experience and knowledge in specialist areas such as bridges, structures, locks and waterways.

Some of the very latest equipment from all over Europe, a fleet of dedicated vehicles and an intricate knowledge of drainage systems give ADC the edge. Outstanding service has meant long working relationships with the likes of County Councils, IDB's and the Environment Agency.

CCTV Surveys

CCTV equipment enables a detailed survey that can be recorded and analyzed. The data can then be used to generate an onsite report, saving time and saving money. Our very latest custom built equipment allows the widest range of pipe work and culvert surveys.

Jetting & Tanker Operations

With a modern fleet of specialized vehicles we supply combined Jetting and Tanker operations (10-2500 psi) for an array of drainage scenarios covering all our customers' requirements.

De-watering Technology

ADC's investments in on site equipment is proving to be the way forward. Using our de-watering treatment methods, we are reducing the amount of waste being taken off site, reducing our client's costs for disposal, reducing vehicle movements and reducing carbon emissions, improving our carbon footprint.

Specialist works

ADC maintains that every drainage problem has a solution. We employ specialist equipment and methods for culvert cleaning, root cutting and removal, scale removal, tidal outfall and siphon inspections.

Relining

Remedial work can be undertaken to return the drainage system back to working order by using a No Dig procedure that minimizes disruption and adds years of working life to an otherwise damaged system. By correct relining, massive cost savings can be achieved.

Preventative Maintenance

ADC is currently servicing over 200 sites nationwide under our contract service division. Annual maintenance contracts can be arranged to suit the client's individual requirements.

Specialist Silt Clearance: 'The Silt Pusher'

New specialist silt clearance equipment has been introduced into the UK from Holland.

Using Dutch technology, we are able to assist in the removal of silt from rivers, watercourses, lakes and ponds.

Following the success of bringing into the UK the first silt pusher the C86xs, we have now launched the larger C86s with a front blade capable of pushing up to a width of 8.2m and to a depth of 3.4m.

Amphibious workboat

The latest addition to the ADC machine pool is an amphibious vessel with high performance turbo diesel motor, providing more power to the machine and its tools. It can cut and collect aquatic weed and reed growth, dredge, excavate, clean up oil spills and much more.

Its low ground pressure allows it to operate in sensitive areas without damage to the environment.

It is ideal when working on wildlife reserves and other sensitive areas normally inaccessible to conventional machines. Being able to simply travel from land to water is a great asset in wetland conservation management.

Customer Base

The calibre of our clients is testament to the quality of our service. We are proud to work with Environment Agency, County Councils, Universities and many Civil Engineering & Construction companies.

Asset Management

It is becoming more and more important for Councils, Internal Drainage Boards, Environment Agency and even small retail/ industrial estates to have a full asset register so they can manage and maintain all drainage networks.

This programme has been designed to collect and maintain information on the current condition of drainage systems and watercourses, including culverts, bridges and embankments. It provides the clients with a database for future works, to understand the current condition of their assets and determine the ownership of assets within their areas.

Our extensive industrial knowledge and state of the art equipment allows work to be carried out quickly and efficiently giving clients cost effective and professional service. We offer highest levels of consideration to safety and environmental issues on all of our projects and you can be confident of a quality of service every time.
